About

I am currently a postdoctoral research scholar at Vanderbilt University, TN. My research belongs to the area of graph representation learning (GRL), an emerging field having far-reaching applications in a diverse range of industries, from drug discovery and optimization to recommendation and forecasting. My research mainly focuses on the design of novel GRL approaches to enhance their performance and apply them to solve complex real-world problems. Working closely with a team of experts, I have developed several GRL approaches that have been applied to problems such as circuit design completion, link prediction in Ethereum data, and fraud detection in social networks. In addition to my work in GRL, I also work in data science, graph theory, and network science. Recently, I have expanded my research to include GRL applications in the field of electronic design automation as well as neuroscience. Through my research, I strive to make meaningful contributions to the field of GRL and improve our understanding of the complex systems that shape our world.

Industry Experience

- **C++ Programmer**   Jul. 2014 - Sep. 2017
  Shaheen Foundation, Islamabad

  As a C++ programmer, my role primarily revolved around the development and implementation of advanced QT applications for a diverse range of clients. I worked

in close collaboration with a team of professionals, where my responsibilities involved not only the programming aspects but also requirement engineering, model prototyping, testing, and seamless deployment of high-quality solutions. My proficiency in C++ programming and extensive experience with QT allowed me to deliver bespoke solutions that met the unique and complex requirements of the clients.

- **Graph Data Scientist** May 2021 - Mar. 2022
  BUILD & CODE Germany
  As a Graph Data Scientist, my responsibilities include developing advanced machine learning models for the completion of a huge knowledge graph, which contained over 10 billion data points. It was a challenging but rewarding experience to work on a project of such a massive scale, and it allowed me to gain valuable experience in handling and processing big data. I worked on a range of advanced machine learning techniques, including Graph Neural Networks (GNNs), classical ML methods, Neo4J and Cypher.
